Branch protection rule

Apply rule to

master

Applies to 1 branch

master

Rule settings

Protect matching branches

Disables force-pushes to all matching branches and prevents them from being deleted.

☒ Require pull request reviews before merging

When enabled, all commits must be made to a non-protected branch and submitted via a pull request with the required number of approving reviews and no changes requested before it can be merged into a branch that matches this rule.

Required approving reviews: 1 ▼

☐ Dismiss stale pull request approvals when new commits are pushed

New reviewable commits pushed to a matching branch will dismiss pull request review approvals.

☐ Require review from Code Owners

Require an approved review in pull requests including files with a designated code owner.

☒ Require status checks to pass before merging

Choose which [status checks](#) must pass before branches can be merged into a branch that matches this rule. When enabled, commits must first be pushed to another branch, then merged or pushed directly to a branch that matches this rule after status checks have passed.

☐ Require branches to be up to date before merging

This ensures pull requests targeting a matching branch have been tested with the latest code. This setting will not take effect unless at least one status check is enabled (see below).

Sorry, we couldn't find any status checks in the last week for this repository.

[Learn more about status checks on GitHub.](#)

☐ Require signed commits

Commits pushed to matching branches must have verified signatures.

☐ Include administrators

Enforce all configured restrictions for administrators.
